

ISMAILI YOUTH CAMP • PHANDER, GHIZER

Artificial Intelligence

Understand it • Prompt it • Build with it

A hands-on session — from language models to solving real problems

Session Roadmap

Five steps — we build up from ideas to a live challenge

What is AI — and what is an LLM?

Artificial Intelligence

- Machines doing tasks that normally need human intelligence
- Understanding language, spotting patterns, making decisions
- Already around you: maps, translation, recommendations

Large Language Model

- AI trained on huge amounts of text (ChatGPT, Claude, Gemini)
- It predicts the most likely next words to form an answer
- Feels like it “knows” — really it is very good at guessing

Key idea: An LLM is a powerful prediction engine — it can be confidently wrong. You bring the judgment: always check what matters.

PART 2

AI Workflows — how it fits into real work

A workflow means breaking a goal into steps, and letting AI help at each one — while you stay in control.

Example Promote Phander tourism: Define the audience → AI drafts a post → you fact-check & adjust the tone → publish.

PART 3

Prompting & why context matters

A prompt is your instruction to the AI. The more relevant context you give, the sharper the result.

✗ Weak prompt

"Write about tourism."

✓ Strong prompt

"You are a tourism officer in Ghizer. Write a friendly 150-word paragraph promoting Phander Lake to local families."

Context = detail that matters. Same question, different context → different answer. Give who, why, and for whom.

Solve a real business with AI

6 teams • each gets one business

1

Know your business

Who are they? What do they do?

2

Spot a real problem

Find one challenge worth solving

3

Prompt the AI

Ask for ideas — add role & context

4

Refine together

Push back, improve, pick the best

5

Pitch in 3 minutes

Present your AI-powered solution

Mountain guesthouse

Apricot / fruit farm

Handicrafts shop

Local tour operator

Yak dairy & cheese

Tuition / study center

Businesses are examples — swap in any that fit your teams.

PART 5

The Game

A surprise team challenge — revealed on the spot.

All teams compete

Think fast, use what you learned

Points & a winner

Facilitator note: finalise the game format before the session — see the notes below this slide.

Take these with you

AI is a tool

It assists — you decide. Never switch off your own judgment.

Prompting is the skill

Role, task, context, format. Context is what makes answers useful.

Learn by building

The best way to get good is to keep experimenting on real problems.
